Dr. RVR NRIIT DTBU

Projects included

1. Online Shopping Website
2. Digital Library Website
3. College Admissions Website

Submitted as part of the Web Development Activity-Based Learning assignment.

1. Introduction

This report presents three front-end web development projects created using HTML and CSS. Each project demonstrates the use of semantic page structure, navigation, responsive layout techniques, reusable content cards, and consistent visual styling. The webpages were rendered from the supplied HTML files for the output illustrations included in this report.

2. Objectives

- Understand the basic structure of an HTML document.
- Apply CSS for layout, typography, colors, spacing, and visual hierarchy.
- Create navigation and content sections suitable for a multi-section webpage.
- Use cards, grids, labels, and forms or controls where appropriate.
- Apply responsive CSS rules so layouts can adapt to smaller screens.
- Present the completed webpages and summarize their main features.

3. Tools and Technologies

HTML5: Used to structure headings, navigation links, sections, lists, cards, forms and other page content.

CSS3: Used for colors, spacing, typography, grid and flex layouts, hover effects, rounded corners, and responsive media queries.

Browser rendering: The supplied webpages were rendered to create the output images. No source-code screenshots are included, as requested.

4. Project One: Online Shopping Website

The Online Shopping website is a sample storefront that presents products and promotional content in a clean, customer-friendly layout.

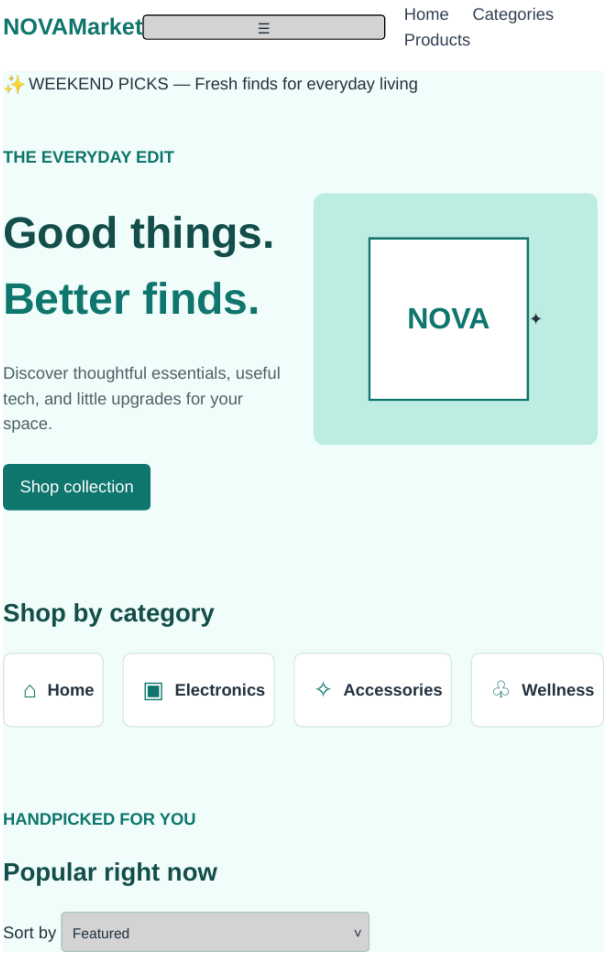

Main Features

- Promotional hero area and site navigation.
- Product cards with product artwork, ratings, discounts, and prices.
- Shopping-related buttons and a cart information area.
- Newsletter section and footer.
- Warm color palette and responsive grid styling.

Technology Used

HTML5 and CSS3. The page styling is included within the supplied HTML document using a style block.

Webpage Output

Output image rendered from the submitted webpage source.

Learning Outcome

The project demonstrates product presentation, card-based layouts, spacing, typography, and responsive styling for an e-commerce interface.

5. Project Two: Digital Library Website

The Digital Library website provides a simple catalog interface for browsing books and checking their sample availability status.

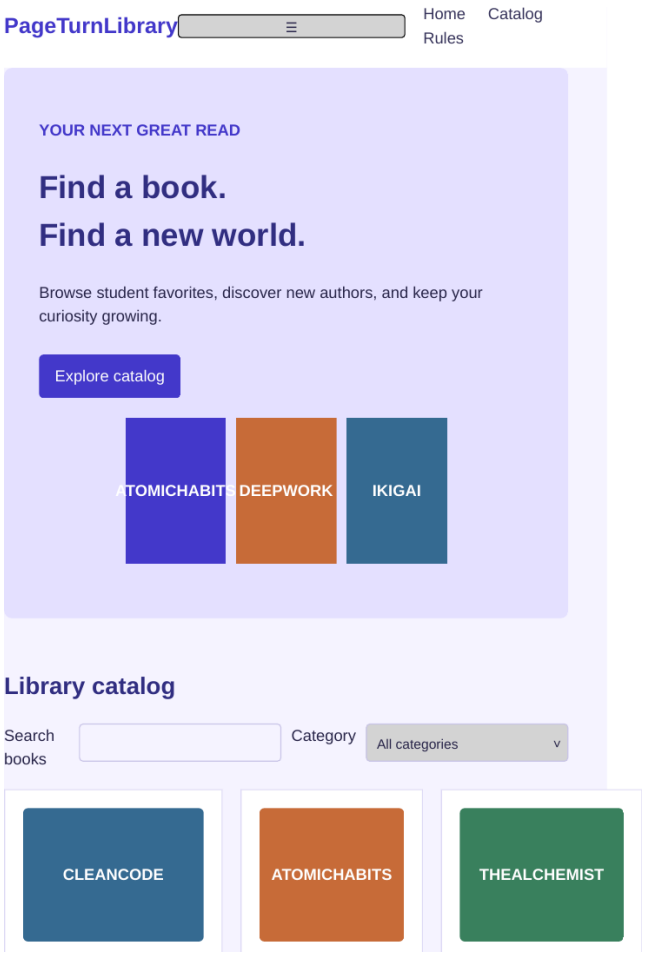

Main Features

- Library introduction with a visual stack of books.
- Book catalog with title, author, category, and availability labels.
- Search field and category selector in the interface.
- Library rules section.
- Green-themed visual design with reusable book cards.

Technology Used

HTML5 and CSS3. The page styling is included within the supplied HTML document using a style block.

Webpage Output

Output image rendered from the submitted webpage source.

Learning Outcome

The project demonstrates catalog organization, form controls, content cards, navigation anchors, and clear status labels.

6. Project Three: College Admissions Website

The College Admissions website introduces an institute, highlights campus features and departments, and outlines a sample admission process.

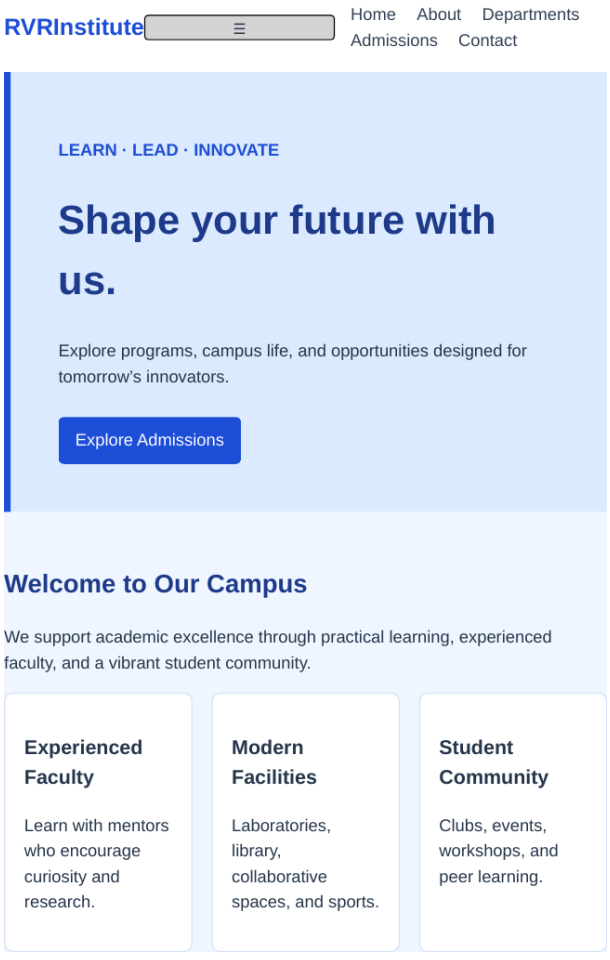

Main Features

- Navigation links for Home, About, Departments, Admissions, and Contact.
- Campus introduction and facility cards.
- Popular department cards.
- Numbered admission steps and contact information.
- Green color palette and responsive layout rules.

Technology Used

HTML5 and CSS3. The page styling is included within the supplied HTML document using a style block.

Webpage Output

Output image rendered from the submitted webpage source.

Learning Outcome

The project demonstrates institutional information architecture, section-based navigation, grid cards, ordered lists, and a clear call to action.

7. Overall Learning Outcomes

- Practiced building web pages using HTML elements and CSS rules.
- Used common interface patterns such as navigation bars, hero sections, cards, grids, and footers.
- Applied color, spacing, typography, and hover styling to improve readability and appearance.
- Used responsive media queries to adjust layouts for smaller screens.
- Learned to organize content according to the purpose of each website.

8. Conclusion

The three projects demonstrate practical use of HTML and CSS to build different types of websites: an online store, a digital library, and a college admissions page. Completing these activities strengthened understanding of webpage structure, visual styling, responsive design, and user-interface organization. The output images in this report show the rendered webpages; source-code images have intentionally been omitted.
